

LANARS

Hello!

We have a couple of tasks for you :)

Develop a REST API for a portfolio publication site.

Where:

All users are able to:

- signup
- see image feed (image, image description, portfolio name that contains this image) ordered by creation time
- search image by name/description/portfolio name that contains this image
- leave the comments for the picture

Registered user should be able to:

- login, logout
- create portfolios
- have several portfolios
- upload image in his portfolios
- edit, delete own profile
- edit, delete own portfolios
- edit, delete own images

Portfolio:

- Should contain name, description, images

Image:

- Should contain name, description, comments

Key requirements:

- Should be implemented Error Handler with next statuses 400, 401, 403 and 404
- Should be implemented request validation

- Project should contains db migration files

Use the following technologies:

- PostgreSQL
- Python as a server technology (Django or Django REST framework)
